

Anatomical Sport

Your mission is to write a description of a sport or action, (such as kicking a soccer ball or riding a bike) using complex anatomical terminology. You must describe **(NOT LIST)** all body parts, directions, actions and sport equipment in descriptive terms. You may **NOT** give hints using the names of body parts or pieces of equipment. Descriptions will be read in class, allowing other students the opportunity to determine the sport or action you are doing and the skill you are performing. This activity must include **8 to 10** anatomical terms, not counting those used more than once.

EXAMPLE– The Big Game

There were only 10 seconds left in the biggest game of the year. I bent my *cervical* upward and saw with my *orbitals* my target as big as day. The *orals* of the crowd were bursting with sound and their *brachials* were waving everywhere. My *thoracic* was pounding and sweat was racing down my *frontal* onto my *buccals*. I squared my *pedals* up to the line and bent my *crurals*. I then bent my *antecubital* and aligned my *antebrachial* up with my target. I jumped into the air and let the spherical object go at the highest point in my elevation, making sure to break my *carpals* for a good follow through. What sport am I playing?
